Faculty Bio

Biography

Dr. John J. Leggett is Professor of Computer Science and Library Science, Associate Dean for Digital Initiatives, Director of the Texas A&M University Digital Library, co-Director of the Texas Digital Library, and holder of the Ford Endowed Professorship at Texas A&M University. His research efforts over the last 20 years have been focused on information technologies for scholarly work. He has published extensively in a variety of journals and presented numerous invited talks internationally. He was a founding editor of the open access Journal of Digital Information and previously served as Associate Editor of ACM Transactions on Information Systems. He has been instrumental in forming the Hypertext, Digital Libraries and Open Repositories conference series.

Research Interests

Distributed Repository Architectures, Preservation Networks, Scholarly Communication, Digital Libraries, Collection Understanding, Story Telling Engines, Humanities Informatics, Computational Media, Information Science and Technology, Computer-Supported Collaboration, Human-Computer Interaction, Multimedia and Hypermedia Systems

Recent Publications

- Maslov, A., Mikeal, A. and Leggett, J. "Cooperation or Control? Web 2.0 and the Digital Library". Accepted to appear in The Journal of Digital Information, Vol. 9, No. 28, Fall, 2008.

Welcome to the Texas Digital Library Weblogs

Blogs help faculty share their work with colleagues across the world. Blogs can provide a rapid mechanism to disseminate current news, post excerpts from works in progress, and discuss research findings. Texas Digital Library (TDL) blogs are united by their focus on research and scholarship produced by – and impacting – institutions of higher education in Texas.

TDL offers a convenient service for busy faculty and researchers to get a blog up and running quickly. Since this service is offered through your institution you will be able to use your regular university-provided account when logging into your blog.

Stanford's Center for Internet and Society takes on another fair use case

Posted by Georgia Harper on Feb 8th, 2009

The Stanford Center for Internet and Society runs the famed [Fair Use Project](#), responsible for taking on a number of high-profile cases recently. The Center magnificently prosecuted [Carol Shloss' fight with the James Joyce estate](#) to a beneficial settlement. I always recommend reading its details to worried scholars asking for advice about how to persuade reluctant (ie, risk-averse) publishers to accept a claim of fair use in scholarly commentary and criticism. Now [the Center's Anthony Falzone](#) has turned his attention to another fair use case, one involving [the transformation of an online photo of Barack Obama into a series of iconic posters, by artist Shepard Fairey](#).

There are cases all over the map on the issue of the extent to which an artist can build upon another's work without permission. Historically, both in terms of process and product, art involves much more direct and literal appropriation than literature does, yet the same copyright rules apply to both. The issue will be the degree to which our courts are ready and willing to give fair use sufficient scope to accommodate transformational uses — even commercial ones — in a digital era. As the Washington Post story linked to above recounts,

To create his Obama poster (which he did in less than a week), Fairey grabbed a news photograph of the candidate off the Internet. He sought an Obama that looked presidential. "He is gazing off into the future, saying, 'I can guide you,'" is how Fairey reads the image. The artist then simplified the lines and geometry, employing a red, white and blue patriotic palette (which he plays with by making the white a beige and the blue a pastel shade). He uses a lot of red along with boldface words: PROGRESS or HOPE or CHANGE.

The story goes on to note Fairey's thoroughly non-traditional view of copyright:

Welcome to the Texas Digital Library Wikis

Wikis allow team members to collaborate across the room, or across the world. They provide a collaborative editing environment where each member can create, edit, and link web pages easily. Texas Digital Library (TDL) wikis are provided for research teams looking for a central place to share knowledge, helping the team accomplish their research more efficiently.

TDL offers an easy to use wiki service for faculty members and their research teams. The wiki can be secured through your institution's regular university-provided authentication service or open to the public.

Welcome to the Center for Innovation in Teaching and Research

The mission of the [Angelo State University](#), ASU, [Center for Innovation in Teaching & Research](#) is to provide a diverse faculty with programs that foster teaching, research, mentoring and service.

CITR is dedicated to providing programs and services for faculty to enhance their professional career. We provide support for teaching and learning, teaching with technology, faculty research and faculty service. It is our goal to support faculty with resources and services that promote professional success, recognize and reward achievements, and invite lifelong learning, collaboration and growth.

Texas Learning Object Repository

The UT TeleCampus is leading a project to develop a statewide learning objects repository (LOR) on behalf of the Texas Higher Education Coordinating Board and the UT System Office of Health Affairs. The project will build on lessons learned in the pilot project conducted by the University of North Texas.

TxLOR will be hosted by the Texas Digital Library (TDL) using MIT's open source dSpace software augmented by TDL's Manakin XML rendering engine. TDL's Vireo application, potentially in conjunction with newly-released peer review code (from Google's Summer of Coding project), will provide the workflow. Metadata schema will consider, among others, Dublin Core and SCORE for academic content, and the Medbiquitous schema from Johns Hopkins (et. al.) for medical content.

Welcome to Peer Reviewed Journals

The Texas Digital Library host on-line peer reviewed scholarly journals. TDL is able to offer a complete service covering the peer review process starting from author submission, the peer review process, editing, and to publishing. Using an on-line system for journal publication offers advantages over their physical counterparts in terms of cost and speed.

TDL offers a complete solution for faculty and researches in establishing a new journal or migrating an existing peer reviewed journal on-line.

Vol 1, No 2: Consumer Behavior in Virtual Worlds

With so many people making the virtual leap many marketers are eager to join them and stake their claim in this new landscape. Unfortunately for many their efforts have failed to live up to expectations and they have since withdrawn. So what, do we need to do differently in virtual worlds than we do in the real world in order to achieve success? In this issue we aim to stimulate dialogue by exploring what, if any, differences exist between real world and virtual world consumer behavior. Topics addressed include body image, virtual goods and brand value.

Journal of Digital Information

Publishing papers on the management, presentation and uses of information in digital environments, JoDI is a peer-reviewed Web journal supported by Texas A&M University Libraries.

First publishing papers in 1997, the Journal of Digital Information is an electronic-only, peer-reviewed journal covering the broad topics related to digital libraries, hypertext and hypermedia systems, and the issues of digital information. JoDI is supported by the [Texas A&M University Libraries](#) through the [Digital Initiatives, Research and Technology](#) group, and hosted by the [Texas Digital Library](#).

[+] About this image

What is a Repository?

The Texas A&M Repository is a digital service that collects, preserves, and distributes the scholarly output of the university. The repository facilitates open access scholarly communication while preserving the scholarly legacy of Texas A&M faculty. The repository contains many types of content, including electronic theses and dissertations, faculty papers and books, technical reports, conference proceedings, and digitized maps.

Support new scholars and the graduate schools that foster them...

While increasing numbers of Texas universities require students to submit electronic theses and dissertations (ETDs), technology and workflow processes for ETD management and publication haven't kept up with demand. Born-digital ETDs are primary candidates for deposit in institutional repositories, which in turn give graduate work greater visibility in the scholarly world. But without sufficient tools for managing their submission and publication, graduate school offices can feel overwhelmed. To meet the needs of both graduate schools and students, the TDL has created Vireo.

What is Vireo?

Vireo is part of the TDL's turnkey ETD solution for Texas universities that addresses all steps of the ETD process, from submission to publication to preservation. Using DSpace Manakin's dspace capabilities for creating new workflow functionality, TDL developers created Vireo to handle the submission

Verify Your Information

Please verify all of your personal information. Some of the information has been provided by your school; if this information is in error, you will need to correct it through the appropriate office at your school.

Required fields are indicated with an asterisk.

Your name should appear as it does on your title page. You can use Unicode characters, if your computer supports them.

Personal Information

* First Name: John

Middle Initial: J

* Last Name: Leggett

Suffix:

* Email: leggett@library.tamu.edu

Year of Birth:

Select the degree and major that are listed on your title page.

You must enter a permanent, long-term address. If your present address is different, use the Current Address field.

Affiliation

* School: My School University

* Department:

* Degree: ...choose

2009 Training Sessions

The Texas Digital Library (TDL) is pleased to announce the first training sessions for 2009. We invite staff from all TDL member institutions to join us at Baylor University this spring as we begin our regular training program of full- and half-day courses.

Please visit the [Baylor University registration page](#) to sign up for classes.

LOCATION

Baylor University, Dutton Avenue Parking Garage, Rooms 102 or 103

All TDL training seminars are located in the Baylor ITS offices in the Dutton Avenue Office and Parking Facility. The building/garage is located at the corner of Dutton Avenue and University Parks Drive. TDL training sessions will take place in Rooms 102 and 103, located directly inside the entrance of the Dutton Avenue building.

- Location of Dutton Avenue Office and Parking Facility (Building 69)

If you are planning to stay overnight in Waco, here are some options for accommodations.

COURSE SCHEDULE

MAY 13TH
Note: Registration ends April 29, 2009 for all May 13th courses

Course Option 1: [Dspace Customization](#)

Duration: Full Day

Course Option 2: [Electronic Thesis and Dissertation Submission and Management with Vireo](#)

Duration: Full Day
