Hangin' w/ TDL

ONLINE COMMUNITY HOURS WITH TEXAS DIGITAL LIBRARY

WEDNESDAYS | 1-2PM | STARTING MARCH 25, 2020

Join Texas Digital Library staff and fellow TDL members for a weekly hangout session, starting in March.

We will not have an agenda but will rather look to our members to drive conversations and share coping tactics during these trying times.

No registration or RSVP required. Come as you are!

Community Update
Good Practice Principles for Scholarly Communication Services

COAR and SPARC have developed seven good practice principles to ensure that scholarly communication services are transparent, open, and support the aims of scholarship. These principles can be used by users to make decisions about which services they will contract with, and by service providers to improve their practices and governance.

**GOOD GOVERNANCE**
The service has strategic governance that allows community input on the direction of the service and operational governance with community representation and decision-making power.

**OPEN STANDARDS**
The service uses open APIs to enable interoperability, and adheres to open standards. Ideally, the platform is based on open-source software, but in cases where it is not, user-owned content is managed according to well-established, international standards.

**FAIR DATA COLLECTION**
Only data necessary for the service’s provision are collected from users and the type of the data collected and how they are used is clearly and publicly articulated.

**TRANSPARENT PRICING AND CONTRACTS**
The service’s contract conditions and pricing are transparent and equitable, with no non-disclosure agreements included.

**EASY MIGRATION**
User-owned or generated content can be easily migrated to another platform or service upon termination of contract, without any additional fee from the service provider.

**SUCCESSION PLANNING**
If the service is a nonprofit, the organization’s bylaws state the conditions and terms governing how the organization may be transferred or wound down. If the service is provided by a for-profit entity, the contract/Agreement should not be assignable to another entity without the client’s express permission.

**OPEN CONTENT**
Content, metadata and usage data are immediately, openly and freely available in machine-readable format via open standards, and using licenses (like CC0 or similar) which facilitate reuse.

*These principles are informed by Principles for Open Scholarly Infrastructure v1 by Bilder G, Lin J, Neijol C (2015) © 2019 COAR and SPARC, subject to a Creative Commons Attribution-4.0 International License*
