Sustainable Support for OER Implementation

Ariana E. Santiago, OER Coordinator
Twitter: @aripants
Incentive program started 2018
Faculty interest and administrative support
Want to better support instructors in replacing traditional textbooks with OER
Created OER adoption workflow:

Identify UH-specific needs

- Tracked consultations and questions
- Most frequent topics:
  - Creation or adaptation
  - Alternative Textbook Incentive Program
  - Copyright permissions

*Screenshot from Environmental Scan of OER Needs by Ariana Santiago, internal documentation*
Look at existing workflows

- Borrow from others!
- Identified key qualities for UH workflow:
  - Clear & user-friendly
  - Provide practical guidance
  - Comprehensive
  - Address high-priority topics
  - UH-context and info
  - Incentive program

OER adoption workflow for UH

Find and Evaluate Course Materials

Explore course materials in your subject area
Search for open educational resources (OER) that may be appropriate for your course. OER can be freely used, shared, and even modified to fit your needs.

Library-sponsored resources - such as journal articles, book chapters, and streaming video - are an option for reducing the costs of textbooks for students. Library-sponsored resources are not entirely free (the library pays for access to them) and cannot be freely used, shared, or modified (due to more restrictive copyright licenses), but can be made available at no additional cost to students.

Contact the OER Coordinator or your subject librarian for assistance in finding resources.

Review and evaluate the resources
Review and evaluate the resources you find to determine whether they are appropriate for your course. Many open textbooks, such as those in the Open Textbook Library, have been peer-reviewed by faculty or subject matter experts; these reviews can assist your own evaluation. Use the following template and evaluation rubrics.

- Evaluation Strategy Template
- OER Evaluation Criteria from Affordable Learning Georgia
- Open Textbooks Review Criteria from BCcampus

OER adoption workflow for UH

Create OER, if necessary

Design, write, and revise content
A significant step in creating OER is designing, writing, and revising the content. UH Libraries currently provides limited support in these areas. However, several resources exist to guide authors in the process of creating and publishing OER:

- Authoring Open Textbooks by the Open Textbook Network
- The Rebus Guide to Publishing Open Textbooks (So Far) by Rebus Community
- Open Education Self-Publishing Guide by BCcampus

Determine format for the new OER
Determine the format for your new OER (e.g., HTML, PDF, Word document, etc.). File type and formatting impact accessibility of resources. The OER Accessibility Toolkit includes best practices and resources for enhancing accessibility in multiple file formats.

UH Libraries provides an authoring tool, Pressbooks, for the creation of OER. Pressbooks provides a place to host your OER and makes it available in multiple formats. If you are interested in using Pressbooks, contact the OER Coordinator or sign up here.
